Index – 1985

Accessory cells 65
acetylcholine receptors (AChRs) 177
– antibodies to 209
adrenal cortical hormones 153
antibody blockade 185
antibodies 177
–, monoclonal 1, 71, 325
–, anticardiolipin 260
–, antineuronal 255
–, antiphospholipid 262
–, lymphocytotoxic 49, 255
antigens
–, lymphoid differentiation 114
–, neuroectodermal 114
anti-idiotypic responses 224
amyotrophic lateral sclerosis (ALS) 141–152
–, immunogenetics 143
arteritis 258
astrocytes 57, 61, 64, 104
autoantibody 133, 209
–, antinuclear 285
–, motor neuron trophic factor 147
autochtonous tumors 430
autoimmune disease 108
autoimmunity 129
autoimmune mechanisms 197, 305
autoimmune reaction 295
azathioprine 350

β-endorphin 154
B cells 2
–, activation 210, 328
bacterial preparations 323
biological response modifiers (BRMS) 325, 327, 429
blood-brain barrier (BBB) 103
blood vessel lesions 278
brain, immunology 57–70

Ca^{2+} channels 132
cancer 129, 321
cancer chemotherapeutics 361–374
castration, immunological 405
cell-mediated immunity (CMI) 169
central nervous system
–, inflammation 197
–, T cell subsets 48
–, thymosin and lymphokines, action in 158
cerebral spinal fluid (CSF) 47, 253
cerebral vasculopathy 258
ciclosporin (CyA) 348
circulating immune complexes 255
colony stimulating factors (CSF) 389
complement 179
–, deficiencies 282
ConA-induced suppression 51
corticotropin (ACTH) 153
cyclophosphamide 349
cytokines 331

D-penicillamine 352
demyelination 97, 170, 197
demyelinating diseases 3
dermatomyositis 267–293
DNA synthesis, depressed 20
drugs, antiepileptic 5

Encephalitogenic site 295
–, species specificity in 295
encephalomyelitis 197
–, experimental 178
endothelial cells 65
endotoxins 354
epilepsy, immunoglobulins in 5
epitopic suppression 405
experimental autoimmune myasthenia gravis (EAMG) 178
experimental autoimmune neuritis (EAN) 102, 167
–, proteinases in 243
experimental allergic encephalomyelitis (EAE) 72, 98, 295
–, proteinases in 242

Fc receptor 48
feedback, prostaglandin E-mediated 310
fibre necrosis 277

Galactocerebroside 169
gammopathy 29
glioblastoma 59
gliomas, human 111
glioma-associated antigens 111
glucans 387–400
glucocorticoids 349
gold 351
gonadal hormones 153
Guillain-Barré syndrome 165
–, proteinases in 243

Hemopoiesis 387
hormones, adrenal cortical 153
–, gonadal 153
–, luteinizing (LH) 153

Ia antigens 61, 101
Ig synthesis, pokeweed mitogen (PWM)-driven 50
IgA 5
–, deficiency 5
IgM, monoclonal 29

immune complexes 255
immune inflammatory responses, regulation 305
immune response 122, 235
immune system, toxicology of 347
immunity 361
–, cell-mediated (CMI) 3, 216
–, humoral 3
–, neural tissue-directed 145
–, nonspecific 144
–, virus-directed 145
immunodeficiency 321
immunodepression 361
immunogenetics 133
immunoglobulins 5
immunomodulation 361, 429
immunomodulator 327, 387
–, synthetic 335
–, microbial 336
immunopathogenic mechanisms 178
immunopharmacology 347
immunoregulation 45, 210
immunosuppression 348
immunotherapy 104, 321–326, 430
immunotoxicology 347
infections, role of glucans 391
inflammation 235
inflammatory infiltrate 275
inosiplex 350
interferons 322, 429
interleukin 1 (IL-1) 59, 397, 409
interleukin 2 (IL-2) 429
ion channel 187
isoprinosine 324

Komuro-Boyse assay 375

Luteinizing hormone (LH) 153
levamisole 351
liposomes 415
lupus anticoagulant 260
lymphocytes 311
lymphokines 154, 324, 332
lymphotoxin 324

Macrophage 59, 328
macrophage-activating agents 415
Marek's disease 171
metastases 413, 430
monoclonal antibody 1, 71, 325
monocytes 311
multiple sclerosis 45, 63, 71, 97, 197, 235, 305
–, immunocytochemical studies 71
–, lesion formation 72
–, proteinases in 239
murabutide 404
muramyl dipeptides 325, 355
muscle cell 1
myasthenia gravis (MG) 177–196, 209
–, experimental 178
myasthenic syndrome, Lambert Eaton 129–140
myelin 29
–, central nervous system 295
myelin-associated glycoprotein 29
myelin basic protein (MBP) 168, 295

9-substituted hypoxanthines 378
naturally occurring substances 340
neural cell 1
neuritogenic protein (NP) 168
neuroimmunology 1–3
neuropathy 29

Phenytoin 5
polymyositis 267–293
–, cardiac lesions 272
–, genetic investigations 279
–, precipitation by drugs 271
–, pulmonary involvement 274
polyribonucleotides, synthetic 353
prostaglandins 305
prostaglandin E 311
proteinases 235
–, lymphocyte 235
–, macrophage 235

Radiation injury 389
receptor degradation 182
regulatory lymphocyte subsets 282
resistance, non-specific, enhancement of 407

Sulfur-containing compounds 379
synergistic kill 326
systemic lupus erythematosus 251–266
–, neuropsychiatric abnormalities 251

T cells 2, 210, 328, 375
T cell lines 100
T cell subsets 46
–, central nervous system 48
T lymphocytes 59, 61
therapy 423
thymectomy 209
thymic hormones 324, 339, 375
thymomimetic drugs 324, 375–385
thymosins 154, 429
thymus 209, 375
tumor antigens 322
tumor necrosis factor 324
tumor necrosis serum (TNS) 323

Vaccination 401
vaccines, anti-cancer 325
–, synthetic 401
